

IT'S IN OUR HANDS

Healthy Reefs = Healthy Islands

Why is the coral reef important for us?

STORY OF WATER

The reef provides a natural barrier against the open sea and ensures that the fresh water of our island is not infiltrated with salt water.

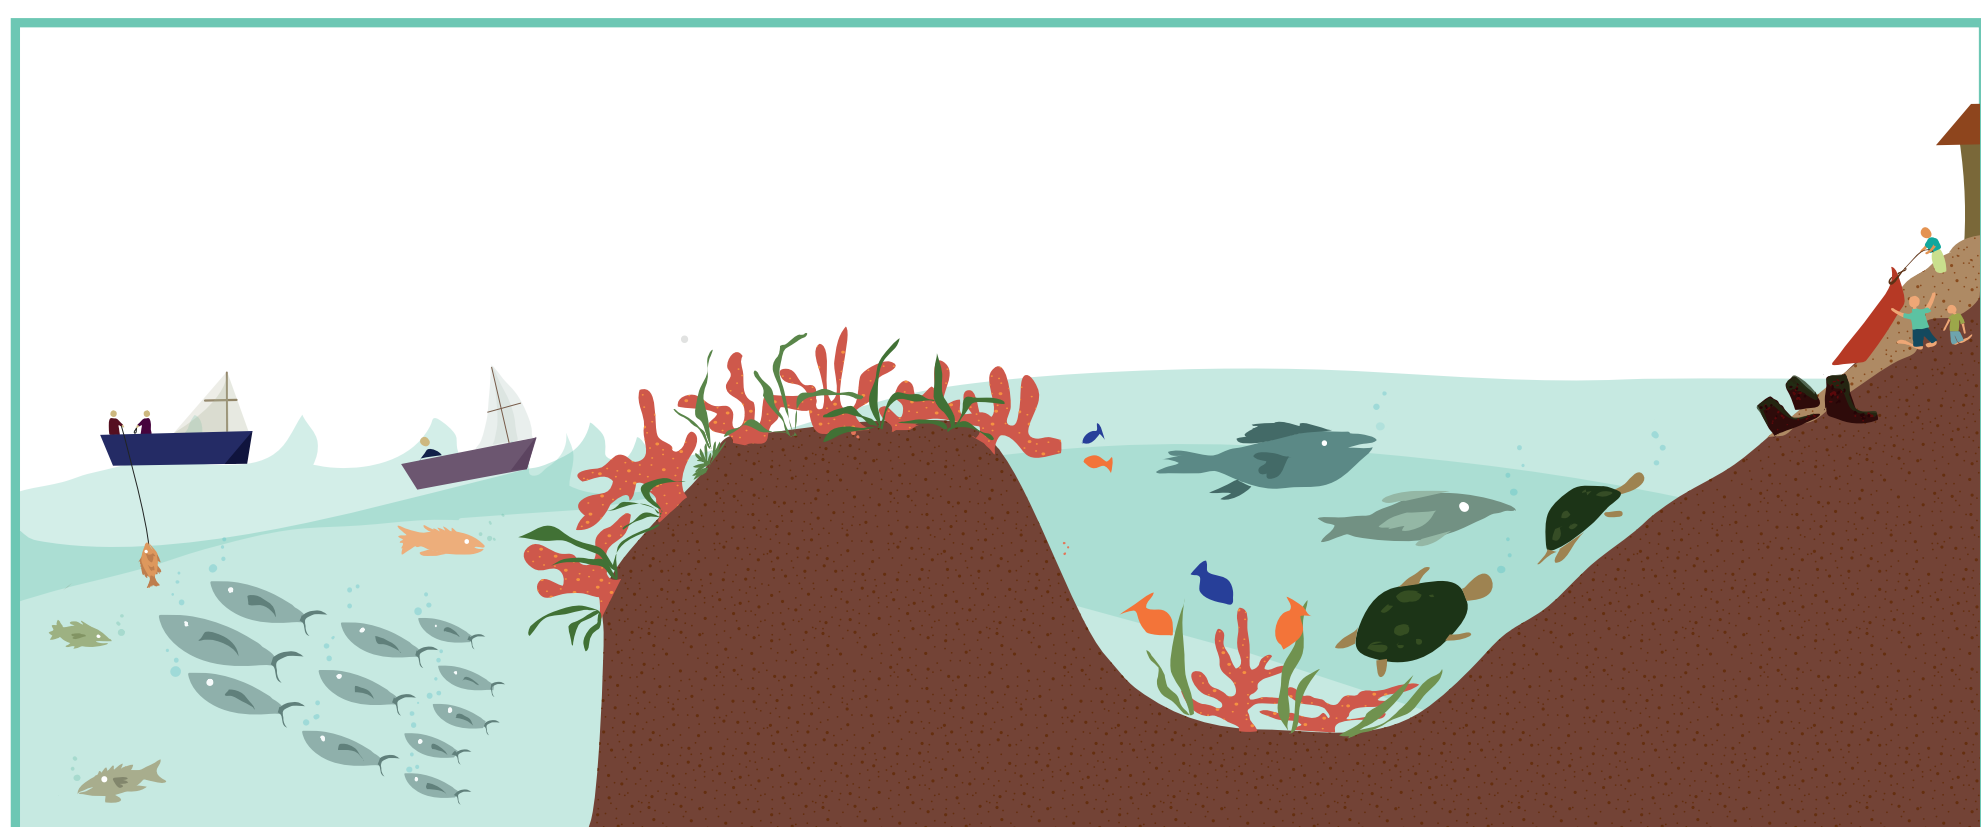

STORY OF LAND

We have tetrapods on our beaches now to keep the sea away, but a healthy reef acts like a wall around the whole island to keep the sea at bay and our beaches intact.

STORY OF FOOD

The reefs give us food: most of the fish we eat come from the reef and so does baitfish to catch tuna. Without a healthy reef we will have no fish to eat.
